Research Data and Records Management

The management of research data and records refers to ways in which recorded information (in whatever form or medium) from research is organised, stored, maintained and accessed both during the lifespan of the research and in the long term. Effective research data and records management supports both high quality research and academic integrity.

HKU recognises the importance of good practice in research data and records management and seeks to promote the highest standards. The University's *Policy on the Management of Research Data and Records* was approved by the Senate at its meeting on May 5, 2015, along with the establishment of a **Task Force on Management of Research Data and Records** to oversee the planning of the implementation of the Policy.

[Policy on the Management of Research Data and Records](#)

1. The University of Hong Kong seeks to promote the highest standards in the management of research data and records (1) as fundamental to both high quality research and academic integrity, and acknowledges its obligations under research funders' data-related policy statements and codes of practice, where available (2), to ensure that sound systems are in place to promote best practice, including through clear policy, guidance, supervision, training and support.
2. The University recognises that accurate and retrievable research data are an essential component of any research project and necessary to verify and defend, when required, the process and outcomes of research. Research data are

THE UNIVERSITY OF HONG KONG

Handbook for
MPhil & PhD Programmes
2018-19

- **MPH5 & PHD5 Probation and Confirmation of Candidature** – for description of a data management plan (DMP)
- **MPH7 & PHD7** Period of Study – for describing when in the period of study, **a dataset, where applicable, is to be submitted**
- **MPH14 & PHD14 Submission of Thesis for Examination** – for description of **dataset submission**
- **MPH15 & PHD15** Thesis Examination – for consideration of **DMP Entry results and dataset** if applicable, and if desired by the examiners

Guidelines and Procedures

Beginning with the September 2017 intake, all **HKU research postgraduate (RPG) students** have responsibility for

1. using a **data management plan (DMP)**, where applicable, to describe the use of data in preparation for, or in the generation of their theses, and
2. depositing, where applicable, a **dataset** in the HKU Scholars Hub.

"RPg" includes the degrees of MPhil, PhD, and SJD.

WHAT IS RESEARCH DATA MANAGEMENT?

HKU now requires Research Data Management (RDM). RDM is a general term covering how you organize, structure, store, and care for the information used or generated during a research project. The benefits of RDM, and the number now of funders, journals, and institutions requiring RDM are many and growing.

SUPERVISORS

Primary Supervisor : **Professor Chan Siu Man** (from 2017-09-01 to 2019-08-31)Co-Supervisor : **Professor Wong Mei Yi** (from 2017-09-01 to 2019-08-31)

PLEASE CHOOSE ONE OF THE FOLLOWING: A, B, C, OR D.

☐ A. Data is freely available on the internet, in libraries or archives. DMP and Dataset submission are not needed. Primary supervisor approval will be sought.

☐ B. Data has been licensed, contracted for, or purchased with a license that explicitly forbids deposit in storage outside the student's or the primary supervisor's control. Primary supervisor approval will be sought.

☐ C. No data was used in my research project for the creation of my thesis. DMP and Dataset submission is not needed. Primary supervisor approval will be sought.

☐ D. Submit Data Management Plan (DMP). Dataset will be uploaded later.

After submitting this form, an email will go to your supervisors. If your primary supervisor rejects this choice, you will need to return to this form, and make a choice that is acceptable to your primary supervisor.

Please click **"SUBMIT"** button below to proceed, or click **"LOGOUT"** to exit form without submission.

Prepare your Data Management Plan with DMPTool

TO-DO #4

What is Data Management Plan?

A document in which you describe:

- **what** data you will collect during your research project,
- **how** you are going to store and manage the data during the project,
- And **what will happen** to the data after the project is finished.

Data Management Plan for Post-Graduate Research Projects

Name:	
Student ID:	
Email:	
Faculty/Department:	
Supervisor:	

RESEARCH PROJECT TITLE

DATA COLLECTION

How will the data be collected or created?

What data will you collect or create?

DOCUMENTATION AND METADATA

What documentation and metadata will accompany the data?

ETHICS AND LEGAL COMPLIANCE

How will you manage copyright and Intellectual Property Rights (IPR) issues?

How will you manage any ethical issues?

STORAGE AND BACKUP

How will you manage access and security?

How will the data be stored and backed up during the research?

SELECTION AND PRESERVATION

What is the long-term preservation plan for the dataset?

Which data are of long-term value and should be retained, shared, and/or preserved?

DATA SHARING

Are any restrictions on data sharing required?

How will you share the data?

RESPONSIBILITIES AND RESOURCES

What resources will you require to deliver your plan?

Who will be responsible for data management?

Guidance**Comments**

HKU

Guidance

Please indicate the types of data generated by the project:

1. Personal data from clinical research (i.e. IRB approved)
2. Personal data from non-clinical research (i.e. HREC approved)
3. Field research data
4. Laboratory research data
5. Creative or Design data
6. Image or Video data
7. Simulated data
8. Other types (please specify)

Questions to consider:

- What type, format and volume of data?
- Is there any software needed to read or analyze any of the data files? If yes, please

DATA MANAGEMENT PLAN

The project will collect and analyze the following data:

- Conductivity and temperature from glider surveys.
- Horizontal currents from shipboard ADCP and the HDSS Doppler Sonars on the R.V. Revelle.
- LADCP/ CTD profiles from the R.V.Revelle.
- Moored ADCPs.
- CTD-u,v profiles from the McLane profilers.
- CTD profiles from the SIO Fast-CTD.
- Fine and microscale temperature from CHIPODs and moored thermistor chains.

Quick-Response data management

The T-TIDE PIs have experience with this collaborative efforts, such as the ONR IWS Sea. To guide both modeling and the Process Experiment planning, quick-look scout data will be centralized on a server at AP

Scout Quick-look data responsibility

J.Klymak LADCP-CTD analysis

S. Johnston SIO glider analysis

L.Rainville Co-operative CSIRO glider Tidal analysis

H. Simmons, J.Klymak Ongoing model output predictions

R.Pinkel, J. Klymak F-C TD site studies

The centralized data access will be maintained for the Process Experiment with the McLane and thermistor chain data provided by the relevant PIs.

1. Data Collection

What data will you collect or create?

How will the data be collected or created?

Metadata

Metadata will address attribution, discovery, and preservation. The following metadata standards may be used to describe and organize the project's data:

- The **IEEE 1484.12.1 - 2002** Standard for Learning Object Metadata (LOM) - may be used to describe and make discoverable learning material data, so that it can be searched for and re-used by others. Descriptors include format and pedagogical attributes.
- **METS** is the Metadata Encoding and Transmission Standard, which will be used to encode the various types of digital objects created by the project. The METS standard is expressed via XML, and is supported and maintained by the Library of Congress. It is used in a number of other dissemination frameworks, including the NJVID project (<http://www.njvid.net/index.php>).

Access and Sharing

The data generated by the project will be hosted on a case-by-case basis in the repository described above. It will be placed in the repository in a timely fashion before the end of the project. Scholars seeking access to the various public-use data will need to agree to Terms of Use and arrange such access directly with the LIU Library. Restricted data must be approved on a case-by-case basis.

Period of Retention

Selection and Retention - Long Island University and the project will ensure that it is accessible regardless of changing formats or technological frameworks. LIU will archive all additional data used in the project.

Archiving and Preservation

The repository framework will serve to preserve the data and also make it discoverable regardless of changing technologies and formats.

Storage & Backup

2. Documentation and Metadata

What documentation and metadata will accompany the data?

Data Confidentiality

Research records will be kept confidential, and access will be limited to the PI and primary research team members. For each testing session, the recorded data will have any identifying information removed and will be relabeled with study code numbers. A database which relates study code numbers to consent forms and identifying information will be stored separately on password-protected computers in a secured, locked office. These computers are housed in research facilities in the Psychology Building at Indiana University-Bloomington, and in the Psychology Department at UCSD. A list of the names of individuals who have participated in each study will be maintained in order to ensure that no individual is tested more than once on related studies. To maintain the privacy of the participants, any report of individual data will only consist of performance measures without any demographic or identifying information.

3. Ethics and Legal Compliance

How will you manage any ethical issues?

How will you manage copyright and Intellectual Property Rights (IPR) issues?

Intellectual Property Rights (IPR)

- Intellectual property rights (IPR) include copyright, patents, trademarks and design rights.
- The **HKU Intellectual Property Rights Policy** sets out ownership of intellectual property rights of staff and students and explains the University position on both copyright and patents.

<http://www.rss.hku.hk/contracts/ipr>

Intellectual Property Rights (IPR)

"If research data included in a thesis are obtained by a collaborative effort (including collaboration between the Student and a supervisor or other researcher at the University), such data may be the joint property of the Student and the collaborating party.

It is strongly advised that Students and supervisors/researchers **make clear agreements in advance concerning the ownership and use of Intellectual Property Rights** created in connection with a Student thesis."

<http://www.rss.hku.hk/contracts/ipr>

2. Data Storage and Preservation

Our short-term data storage plan, which will be used during the experiment, will be to save copies of 1) the .txt metadata file and 2) the Excel spreadsheet as .csv files to an external drive, and to take the external drive off site nightly. We will use the Subversion version control system to update our data and metadata files daily on the University of Alberta Mathematics Department server. We will also have the laboratory notebook as a hard copy backup that will be stored in a fire-proof cabinet.

The data set will be submitted to the Knowledge Network for Biocomplexity (KNB) data repository for long-term preservation and storage. The authors will submit metadata in EML format along with the data to facilitate its reuse. The data manager will be responsible for updating metadata and data author contact information in the KNB.

4. Storage and Backup

How will the data be stored and backed up during the research?

How will you manage access and security?

5. Plans for Archiving and Preservation

All original raw data files and data source processing programs will be versioned over time and maintained in a date-stamped file structure with text files documenting the provenance. The database will be preserved in perpetuity, housed initially at the New Mexico Interstate Stream Commission Central Office in addition to an off-site copy maintained at an NMISC field office and mirrored at the Consortium of Universities for the Advancement of Hydrologic Science (CUAHSI). We will also identify appropriate archiving institutions that might serve as a mirror repository. A data policy and stewardship plan will be established. In addition to archiving, each database table will be exported to a delimited text format to ensure accessibility of the data by other software programs. The data manager at the NMISC will be responsible for the management of long-term storage and archived data.

5. Selection and Preservation

Which data are of long-term value and should be retained, shared, and/or preserved?

What is the long-term preservation plan for the dataset?

4. Data Dissemination and Policies for Data Sharing and Public Access

We are required to share our data with the CAISN network after all data have been collected and metadata have been generated. This should be no more than 6 months after the experiments are completed. In order to gain access to CAISN data, interested parties must contact the CAISN data manager (data@caisn.ca) or the authors and explain their intended use. Data requests will be approved by the authors after review of the proposed use.

The authors will retain rights to the data until the resulting publication is produced, within two years of data production. After publication (or after two years, whichever is first), the authors will open data to public use. After publication, we will submit our data to the KNB enabling discovery and use by the wider scientific community. Interested parties will be able to download the data directly from KNB without contacting the authors, but will still be encouraged to give credit to the authors for the data used by citing a KNB accession number either in the publication's text or in the references list.

6. Data Sharing

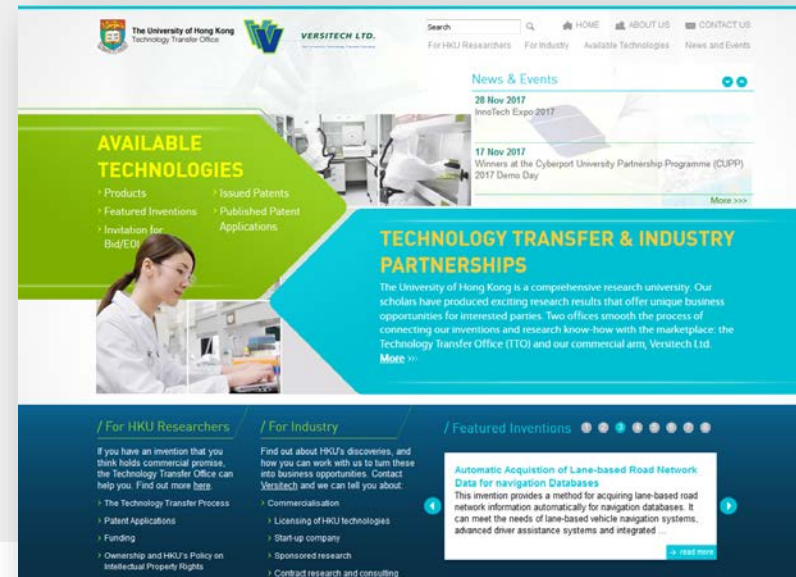

How will you share the data?

Are any restrictions on data sharing required?

Before you share or publish your data

- Review the Depositor's Agreement, and Takedown Policy
- Perhaps you need to anonymize or redact your data before sharing?
- If you have created data which may have commercial value, please consult **Versitech**, or the **Technology Transfer Office**.

<http://www.tto.hku.hk>

5. Roles and responsibilities

The PI will be responsible for all data management during and after data collection.

https://www.dataone.org/sites/all/documents/DMP_Copepod_Formatted.pdf

5. Plans for Archiving and Preservation

All original raw data files and data source processing programs will be versioned over time and maintained in a date-stamped file structure with text files documenting the provenance. The database will be preserved in perpetuity, housed initially at the New Mexico Interstate Stream Commission Central Office in addition to an off-site copy maintained at an NMISC field office and mirrored at the Consortium of Universities for the Advancement of Hydrologic Science (CUAHSI). We will also identify appropriate archiving institutions that might serve as a mirror repository. A data policy and stewardship plan will be established. In addition to archiving, each database table will be exported to a delimited text format to ensure accessibility of the data by other software programs. The data manager at the NMISC will be responsible for the management of long-term storage and archived data.

7. Responsibilities and Resources

TO-DO #5

What to deposit?

Essential,

- **Data Management Plan** (DMP)
- Dataset(s) **quantitative** and/or **qualitative, raw** and/or **processed**,
- **Metadata** about all the data files including file formats (please use open formats wherever possible), Code book (i.e. description of variables), etc.
- **Readme file**, giving particulars of data

<https://lib.hku.hk/researchdata/data.htm>

What to deposit?

If data includes **personal data**, the data should be put under **restricted access**,

- **Personal data from non-clinical research** (i.e. Human Research Ethics Committee (HREC) approved) [<http://www.rss.hku.hk/integrity/ethics-compliance/hrec>] **provide approval code, consent forms, ethical application form**, please state the risk of re-identification from the different datafiles and how the risk has been minimised for any dataset intended for sharing.

<https://lib.hku.hk/researchdata/data.htm>

What to deposit?

If data includes **interviews**,

- Interview transcripts
- Blank questionnaire & interviewer guidelines

If **field research data**,

- provide copy of field research notebook in **digital format**, preferably machine readable

If **lab research data**,

- of working papers and/or lab research notebooks in **digital format**, preferably machine readable

What to deposit?

For **simulated data**,

- how was it generated? Please either explain or provide a link.

For **other types** of data, such as **Image or video data, Creative or Design data**,

- please explain what type of data and how was it collected/generated.

If **software** is needed to read or analyze any of the datafiles,

- please provide full details of software name, version needed, and any instructions necessary to obtain the software. **If you have written your own script for analyzing the data, please include this script also in final deposit.**

Thanks!
